

Silent Rotary Dimmer Controls Leading Edge

300/400/600 watts

The Wafer Rotary Dimmer switches, are suitable for tungsten, mains and low voltage lamps, LED, and fluorescent. \*

Power 600 watts maximum per ten single modules

When two dimmers, or four dimmers that are used side by side these are down rated to 400 watts.

Where four, five or six are required we recommend our larger plate 148 x 148mm where the 600 watts module can be used to its capacity. Also we can supply with 1-10 or on/off switches.

Soft start/soft fade

The starting inrush current is reduced thus giving extended lamp life.

Dimmers and Silent

The wafer dimming electronics do not buzz in operation.

#### Switched Fourth terminal L2

Ideal to switch a second circuit or a fan.

There is an extra line terminal connection L2, which is switched but not dimmed for connection of a ventilation fan.

The front plate is made of brass and plated or painted in the standard colours as listed. **Special finishes are available on request** or the plate can be supplied primed for painting on site.

## Wafer Plate Dimensions

## Wall Box Depth - 47mm

Our switches incorporate a soft start and fade which improves lamp life. Our standard module is 600 watt, when used with 2 of 4 in a line this is down-rated to 400 watts. Where 4 or 5 are required we recommend the plate 148x148.
